

ABHISHEK NARWAL

Senior Software Engineer | Java | Spring Boot | Microservices | AWS | Kafka

+1 (458) 384-9472 • anarwal500@gmail.com • linkedin.com/in/anarwal500 • github.com/narwalabhi • Waterloo, ON

PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with 4.5+ years of experience designing and delivering high-throughput distributed systems, event-driven microservices, and payment infrastructure using Java, Spring Boot, Apache Kafka, and AWS. Currently at Ticketmaster (Live Nation Entertainment), building mission-critical payment gateways and pluggable schema validation frameworks serving millions of transactions. Deep expertise in backend engineering, messaging systems (Kafka, ActiveMQ, SQS), REST API design, and cloud-native deployments on Kubernetes.

TECHNICAL SKILLS

Languages: Java (primary), JavaScript, Python, SQL, Shell Scripting

Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Cloud, Node.js, Express.js, React.js

Messaging & Streaming: Apache Kafka, AWS SQS, ActiveMQ

Cloud & DevOps: AWS (EC2, SQS, ECS), Docker, Kubernetes, Jenkins, CI/CD Pipelines, GitLab CI

Databases: MongoDB, MySQL, PostgreSQL

Tools: Git, GitHub, GitLab, JIRA, Gradle, IntelliJ IDEA, Apache Tomcat

Concepts: Microservices Architecture, Distributed Systems, REST API Design, Event-Driven Architecture, Design Patterns, DSA

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Ticketmaster (Live Nation Entertainment) May 2025 – June 2026

India

- ▶ Architected a pluggable schema validation library for Spring-based message producers supporting Kafka and AWS SQS, reducing invalid message errors and improving extensibility across 5+ downstream services.
- ▶ Built a Card-Present Payment Gateway for POS systems using Spring Boot, Kafka, Docker, and AWS, enabling high-reliability in-store payment processing for large-scale entertainment venues.
- ▶ Engineered microservices with focus on distributed transactions, fault tolerance, and observability using Kubernetes, structured logging, and CI/CD pipelines — reducing deployment cycle time by 40%.
- ▶ Collaborated with cross-functional global teams to define service contracts, API standards, and broker configurations for mission-critical ticketing infrastructure.

Software Engineer — BlackNGreen Advanced Solutions Nov 2021 – Apr 2025

India | 3 years 6 months

- ▶ Designed a TPS (Transactions Per Second) control framework for operator-specific ActiveMQ queues using Spring MVC, enabling dynamic throttling across regions and reducing message processing failures by ~30%.
- ▶ Built an AI-powered Voicemail Assistant integrating Azure STT/TTS, NLP summarization, and WhatsApp/Telegram APIs — delivering real-time transcriptions to 10,000+ users with sub-5s latency.
- ▶ Developed a Smart Monitoring & Alarm System for distributed microservices with threshold-based anomaly detection and multi-channel alerting (call, Telegram, email), cutting incident detection time by 60%.
- ▶ Optimized the Subscription & Billing System by introducing idempotent processing logic, reducing payment latency by 25% and strengthening revenue assurance.
- ▶ Built a Campaign Scheduling System using Quartz Scheduler + Spring Boot with priority queues, failover recovery, and concurrency control for distributed job execution.
- ▶ Delivered a Football Predict & Win IVR Game across multiple telecom operators with billing APIs and retry logic, achieving 99.5% uptime during peak traffic events.

Full Stack Java Developer Intern — Capgemini Technology Services *Jan 2021 – Apr 2021*

India

- ▶ Designed a Railway Reservation System using Spring Boot microservices, Spring Cloud Gateway, and MongoDB — supporting train search, booking, seat visualization, and PDF ticket generation.
- ▶ Built a React.js Admin Portal and Customer Web App with secure JWT authentication for real-time train management and end-user booking flows.
- ▶ Automated PDF ticket generation and email delivery via iText API and SMTP, reducing manual effort and improving booking confirmation experience.

KEY PROJECTS

AI Voicemail Assistant Service *Spring Boot · Azure TTS/STT · NLP · WhatsApp API · AWS EC2*

- ▶ Designed modular microservices for scalable speech recognition and NLP summarization, serving 10,000+ subscribers with multi-platform delivery (WhatsApp, Telegram).
- ▶ Achieved sub-5 second end-to-end latency from voice recording to summarized message delivery across all channels.

Smart Monitoring & Alarm System *Spring Boot · Kafka · Telegram API · Email/SMS*

- ▶ Built automated uptime monitoring for distributed microservices with threshold-based anomaly detection, reducing MTTD by 60%.
- ▶ Implemented multi-channel alert routing (voice call, Telegram, email) ensuring zero missed incidents across production environments.

Campaign Scheduling System *Quartz Scheduler · Spring Boot · Custom Dashboard*

- ▶ Built priority-based job scheduling with dynamic queue management, failover recovery, and concurrent task execution across distributed nodes.
- ▶ Developed a real-time monitoring dashboard for job metrics and execution history, providing full runtime visibility for operations teams.

Railway Reservation System *Spring Boot · Spring Cloud Gateway · MongoDB · React.js*

- ▶ Microservices-based system with REST APIs for train search, booking, and ticket generation; React.js portals for admin and customer flows with JWT authentication.
- ▶ Integrated iText API and SMTP for automated PDF ticket generation and email delivery, eliminating manual intervention in booking confirmation.

EDUCATION

MEng — Systems Design Engineering (AI & ML) *Sept 2026*

University Of Waterloo, Waterloo, Ontario

B.Tech — Computer Science & Engineering *Aug 2017 – Jun 2021*

Lovely Professional University, India | CGPA: 7.12
